PREFACE TO ROAD LOG

The Federal Aid Road Log presents comprehensive information concerning the length, construction details and the location of individual projects and the routes which comprise these projects. The log is divided into the following principal sections:

1. Federal Aid Interstate System (Traveled way)
2. Federal Aid Primary System
3. Federal Aid Secondary System
4. Summary of all Systems
5. Miscellaneous

The maps following the Table of Contents shows the location of the Federal Aid Interstate, Federal Aid Primary, Federal Aid Secondary and Forest Highway Routes.

The log shows construction status as of January 1, 1972.

The following are brief descriptions of the items listed in each column:

Column 1 - Section Description - identifies counties, municipalities, forest and reservation boundaries, route junctions, Forest Highway routes and coincident mileage records. Coincident mileage occurs when two routes overlap. Where two Primary or Secondary routes coincide, the mileage is shown as coincident for the route having the higher number and is deducted from the gross route mileage of this route.

Column 2 - Mile Post - reference point for mileage section

Column 3 - State Maintenance Section Number - Indicates location of Maintenance sections on each route.

Column 4 - Project Number - shows the project classification and number.

Column 5 - Year Built - year of original major construction.

Column 6 - Year Improved - year of latest major road construction or betterment.

Column 7 - Surface Type - code letters indicate uniform surface type as recommended by Federal Highway Administration. Surface types and abbreviations are described below:

A - Primitive Road - PRM - unimproved route (on which there is no public maintenance usable by 4-wheel vehicles and publicly traveled by small number of vehicles.

B - Bladed Road - BLD - road using the natural surface and maintained to permit bare passability for motor vehicles, but not conforming to the requirements for a graded and drained earth road. The road may have been bladed and minor improvements may have been made locally.

C-Graded and Drained Earth Road - GRD - a road of natural earth aligned and graded to permit reasonable convenient use by motor vehicles and drained by longitudinal and transverse systems (natural or artificial) sufficiently to prevent serious impairment of the road by normal surface water, with or without dust palliative treatment or a continuous course of special borrow material to protect the new roadbed temporarily and to facilitate immediate traffic service.

E - Gravel or Stone Road - GRV - a road the surface of which consists of gravel, broken stone, slag, chert, caliche iron ore, chat, disintegrated rock or granite, or other similar fragmental material (coarser than sand) with or without sand-clay, bituminous, chemical or portland cement stabilizing admixture or light penetrations of oil or chemical to serve as a dust palliative.

F - Bituminous Surface Treated Road - BST - an earth road, a soil surfaced road, or a gravel or stone road to which has been added by any process a bituminous surface course, with or without a seal coat, the total compacted thickness of which is less than one inch. Seal Coats include those known as chip seals, plant-mix seals and rock asphalt seals.

G - Mixed Bituminous Road - RMS - FMS - a road the surface course of which is one inch or more in compacted thickness composed of gravel, stone, sand or similar material mixed on the road with bituminous materials under partial control as to gradation and proportions, or mixed in a plant under precise specifications controlling gradation and consistency of composition. The surface course may consist of combinations of two or more layers such as a bottom and a top course, or a binder and wearing course.

J - Portland Cement Concrete Road - PCC - a road consisting of portland cement concrete with or without a bituminous wearing surface less than one inch in compacted thickness.

Column 8 - Surface Thickness - shows compacted base thickness to the closest half inch.

Column 9 - Base Thickness - shows compacted base thickness in inches. Minor variations in base thickness are average for one section.

Column 10 - Surface Width - shows width in feet of gravel surface, oiled mat or pavement.

Column 11 - Roadway Width - shows width in feet to outside of shoulders.

Column 12 - Number of Lanes - identifies two or four driving lanes.

Column 12 - Section Length - Is the length of the project to thousandths of a mile.

Column 14 Location

Municipal shows mileage located within incorporated places

County includes rural mileage exclusive of mileage in reservations

National Forest includes mileage located within boundaries of National Forest

Indian Reservation includes mileage located within boundaries of Indian Reservations

Other includes mileage located within other reservations such as Military Reservations, State Forests, National and State Parks, Game Refuge, etc.

Column 15 - Project Length - Is the constructed length of the project to thousandths of a mile.

Column 16 - Accumulated Route Mileage - This column is an accumulation of section lengths.
